Chirothrips manicatus

Distinguishing features

Female fully winged (rarely micropterous), but variable in size. Body, antennae and legs brown, tarsi paler, fore wings light brown. Antennae 8-segmented; segment II asymmetric with prolonged external margin bearing terminal seta-like sensorium; segments III-IV with sense cone simple and stout. Head small, prolonged in front of eyes with long preocellar area; 3 pairs of ocellar setae present, pair III anterolateral to fore ocellus; maxillary palps 3-segmented. Pronotum trapezoidal, 2 pairs of prominent posteroangular setae. Metanotum reticulate, sculpture forming arches around posterior midpoint; median setae not at anterior margin, smaller than lateral pair. Fore wings pointed; first vein distal half with 2 setae, second vein with 4 setae. Abdominal tergites with transverse sculpture lines medially; posterior margin with craspedum of weak lobes; ovipositor weak with faint teeth. Posterior margin of sternites with distinctive tubercles. Male micropterous, with minute wing lobe; head without ocelli; sternites III-VII with small circular pore plate.

Related species

Currently there are 42 species worldwide placed in the genus *Chirothrips*. In contrast, zur Strassen (1960) treated the genus in a broad sense, with a key to 50 species, whereas Bhatti (1990b) placed several of the species into six new genera, and the generic classification was further reviewed by Nakahara & Foottit (2012). From Europe, zur Strassen (2003) recognised 14 species of *Chirothrips*, of which five have been taken in Britain. *C. manicatus* is very common in Britain, where it is the species of *Chirothrips* with antennal segment II produced outwards that is most likely to be encountered.

Biological data

Each larva feeds and pupates within a single flower of its host plant, and these include Poaceae in several genera such as *Alopecurus*, *Dactylis* and *Poa* (Minaei & Mound, 2010).

Distribution data

Abundant throughout Britain and the island of Ireland, and across the Holarctic Region (Mound *et al.*, 1976; O'Connor, 2008), but also introduced to Australia, New Zealand and Hawaii.

Family name

THRIPIDAE - THRIPINAE
