

Austropyrgus dekeyzeri Clark, Miller & Ponder, 2003

Austropyrgus dekeyzeri (adult size 1.8-2.7 mm)

Diagnostic features

This species belongs to the *Austropyrgus sparsus* group, whose members are characterised by the following shell features: small to medium-sized shells, conical, with convex to slightly convex whorls. In females, the coiled oviduct is of an inverted U-shape or with two or more bends, loops or twists.

Austopyrgus dekeyzeri differs from other members of the group in the following combination of characters: shell small to medium in size; renal gland does not extend into mantle cavity; pallial vas deferens strongly undulating between prostate gland and penis; coiled oviduct and bursal duct join just in front of posterior pallial wall.

This species is not found in sympatry with any other species of Austropyrgus.

Classification

Austropyrgus dekeyzeri Clark, Miller & Ponder, 2003

Class Gastropoda

Infraclass Caenogastropoda

Order Littorinida

Suborder Rissoidina

Superfamily Truncatelloidea

Family Tateidae

Genus Austropyrgus Cotton, 1942

Original name: Austropyrgus dekeyzeri Clark, Miller & Ponder, 2003. In Clark, S. A., Miller, A. C. & Ponder, W. F. (2003). Revision of the snail genus Austropyrgus (Gastropoda: Hydrobiidae): A morphostatic radiation of freshwater gastropods in southeastern Australia. Records of the Australian Museum Supplement 28: 1–109.

Type locality: Tributary of Tambo River at Omeo Highway, north of Jews Pinch, 21.1 km south of Ensay South, Victoria.

Biology and ecology

In streams on water weeds, hard substrata (rocks etc.) and crawling on litter and sediment. Can be locally abundant. Assumed to feed by scraping bacteria and microalgae. Lay solitary capsules containing a single egg. Direct development.

Distribution

This species is known from a number of small streams and rivers of central eastern Victoria.

Notes

Most species of Austropyrgus are geographically isolated and have restricted ranges, and this one is no exception.
