

Ngaldrobia porrecta Ponder, Humphreys, Shea, Dolman & Criscione, 2022

Ngaldrobia porrecta (maximum diameter 2.5 mm).

Distribution of *Ngaldrobia porrecta*.

Diagnostic features

The shell is smooth and the last third of the last whorl detached.

Classification

Ngaldrobia porrecta Ponder, Humphreys, Shea, Dolman & Criscione, 2022.

Class Gastropoda

Infraclass Caenogastropoda

Order Littorinida

Suborder Rissoidina

Superfamily Truncatelloidea

Family Tateidae

Genus Ngaldrobia Ponder, Humphreys, Shea, Dolman & Criscione, 2022

Original name: Ngaldrobia porrecta Ponder, Humphreys, Shea, Dolman & Criscione, 2022. In Ponder, W. F., Humphreys, W. F., Shea, M. E., Dolman, G. & Criscione, F. (2022). Subterranean Tateidae (Gastropoda; Caenogastropoda; Truncatelloidea) from the Ngalia Basin, Northern Territory, Australia. *Molluscan Research* 42: 50-72.

Type locality: In groundwater sampled from Sullivan's Well, Napperby Station, Ngalia Basin, Northern Territory.

Biology and ecology

Members of this genus live in ground water and very little is known of their biology. They presumably feed on bacterial films.

Distribution

Known only from the type locality.
