

# Hoplothrips baileyi

## Distinguishing features

This species has not been studied by the present authors, but see Cott, 1956: 40-42.

## Related species

Known only from a single winged female, this species is mentioned under *H. kincaidi*. It was described as being unusual in color, generally light brown but with the tube and antennal segment VIII lemon yellow.

## Biological data

Presumably breeding on dead branches and feeding on unidentified fungal hyphae, on dead *Salix* branches.

## Distribution data

Known only from California.

## Family name

PHLAEOTHIRIPIDAE, PHLAEOTHIRIPINAE

## Species name

*Hoplothrips baileyi* Cott

## Original name and synonyms

*Hoplothrips baileyi* Cott, 1956: 40
