## Common Name

Hyacinth Orchid

## Originally Described by

Robert Brown in Prodr. Fl. Nov. Holland. 330 (1810)

## Flowering Months

Jan Feb . . . . . Dec

## Description

Dipodium [species](#) have diverse growth forms ranging from leafy epiphytes to leafless geophytes that obtain nutrition through specialized mycorrhizal fungi. The Kimberley [species](#) are all leafless [saprophytic](#), wet season growing geophytes that are only visible when the flowering stems appear.
