

Diuris emarginata

Name and Authority

Diuris emarginata R.Br.

Synonyms (previous names)

Diuris setacea var. *emarginata*

Common Name

Late Donkey Orchid

Complex Name

Diuris laxiflora (Bee Orchids)

Originally Described by

Robert Brown in Prodr. 316 (1810)

Distribution and Habitat

Windy Harbour to Albany, growing in sandy-clay and clay soils in seasonally wet flats, flowering best in the season following summer fire.

Flowering Months

Jan Nov Dec

Description

A late flowering [species](#) 300–450 mm high with four to five smooth leaves 100–180 mm long by 2–4 mm wide and up to eight pale yellow, brown marked flowers 20–25 mm across.

Distinguishing Features

It is closely related to Tall Donkey Orchid (*Diuris drummondii*), predominantly differing in its shorter stature and smaller flowers.
