### Common Name

Corduroy Orchids

### Originally Described by

Robert Brown in Bot.Reg. 7:ad t. 573 (1821)

### Flowering Months

Jan Feb . . . . . Aug Sep Oct Nov Dec

### Description

Although all *Eulophia* [species](#) are geophytic, they have a variety of growth forms from [evergreen](#) to [deciduous](#), some even being leafless saprophytes. The underground storage organs persist for extended periods and comprise flattened tubers or irregularly swollen [rhizome](#) segments, with new segments produced annually.
