

# Phoringopsis

## Name and Authority

**Phoringopsis** D.L.Jones & M.A.Clem.

## Synonyms (previous names)

Arthrochilus subg. Phoringopsis

## Common Name

Elbow Orchids

## Originally Described by

David Jones & Mark Clements in Orchadian 13(10):457 (2002)

## Flowering Months

Jan Feb Mar . . . . . Dec

## Description

Phoringopsis [species](#) have one or two long, semi-erect leaves and a multi-flowered [raceme](#) of insignificant inverted, dull-coloured flowers with a prominent insect-like [labellum](#). The cryptic nature of the flowers means that it is often easier to locate plants by searching for the distinctive leaves which are often found growing in colonies as a result of vegetative reproduction.
