

## Pterostylis rogersii

### Name and Authority

**Pterostylis rogersii** E.Coleman

*Pterostylis rogersii*

### Synonyms (previous names)

Diplodium rogersii

### Common Name

Curled-tongue Shell Orchid

*Pterostylis rogersii* distribution

### Complex Name

Pterostylis aspera (Shell Orchids)

### Originally Described by

Edith Coleman in Victorian Naturalist 46:100-101, Pl. V (1929)

*Pterostylis rogersii*

### Distribution and Habitat

Binningup to Israelite Bay, growing in deep sandy soils in coastal woodlands and shrublands.

### Flowering Months

..... Jun Jul Aug .....

*Pterostylis rogersii*

### Description

A coastal species 70–100 mm high with three to five cauline leaves 20–70 mm long by 2–8 mm wide and one (rarely two) translucent, reddish-brown (more rarely green) and white flowers 12–15 mm across.

*Pterostylis rogersii*

### Distinguishing Features

It is distinguished from the related Red-veined Shell Orchid (*Pterostylis hamiltonii*) by its flattened, hairy labellum and coastal distribution.
