

## Pterostylis serotina

### Name and Authority

**Pterostylis serotina** (D.L.Jones, C.J.French & M.A.Clem.) D.L.Jones & C.J.French

*Pterostylis serotina*

### Synonyms (previous names)

Pterostylis sp. 'late'; Pterostylis sp. 'The Knoll'; Plumatichilos serotinus

### Common Name

Late Bird Orchid

*Pterostylis serotina* distribution

### Complex Name

Pterostylis barbata/turfosa (Bird Orchids)

*Pterostylis serotina*

### Originally Described by

David Jones, Christopher French & Mark Clements in Australian Orchid Review 82(5): 36-38, Fig. 3 (2017) as *Plumatichilos serotinus*

*Pterostylis serotina*

### Distribution and Habitat

Wellington Dam to Albany, growing in sandy and sandy-clay soils in forests and woodlands.

### Flowering Months

..... Oct Nov ..

*Pterostylis serotina*

### Description

A late flowering species 150–250 mm high with a loose, ascending rosette of leaves 12–35 mm across, two to six cauline leaves and one (rarely two) translucent, light green and white flowers 9–11 mm across.

### Distinguishing Features

It is related to Bearded Bird Orchid (*P. turfosa*) and Granite Bird Orchid (*P. saxosa*) but has a more bloated appearance, thicker sepals and a generally later flowering period.
